

**Jonestown Water Supply Corporation  
Nonpoint Source Pollution Abatement Policy**

**Purpose**

The goal of the Nonpoint Source Pollution Abatement Plan (NPS Pollution Abatement Plan) is to reduce the level of nonpoint source pollution from a site once it is fully developed. In the case of an already developed site, the goal is to reduce the levels of nonpoint source pollution by identifying and addressing existing problems and taking preventative measures where potential problems are identified.

**Policy**

It is the policy of the Jonestown Water Supply Corporation (WSC) (the corporation) to control all potential nonpoint source pollution as a result of construction and maintenance operations.

**New Construction**

In order to prevent nonpoint source pollution on new construction projects the Jonestown WSC will obtain Nonpoint Source Pollution Permits from the LCRA to ensure all necessary protective measures are in place.

**Maintenance**

When conducting maintenance on system components, operators will take all necessary precautions to limit runoff and diffuse water that is used for the flushing of main lines. Operators will also log and track all main breaks and monitor soil conditions until the natural vegetation begins to grow.

**Public Education**

The Jonestown WSC will distribute, at its annual membership meeting, Nonpoint Source Pollution educational materials. In addition, the corporation will display and make such materials available to the public in its office.

Adopted by the Board of Directors, this 11th day of October, 2005.
